BigQuery Cost Report

Project: **demo-warehouse** · Generated 2026-10-16T09:18:21.264859+00:00

Pricing: configured value (buyer's rate) ($6.25 per TiB scanned, on-demand). Read-only; no data leaves this machine.
About this scan: this run processed metadata in 0 read-only query/queries and itself billed $0.00 (typically fractions of a cent, often within the 1 TiB/month free tier). It never reads or changes your table data.
Note: This sample was produced from synthetic data, not from a real project - no BigQuery account was contacted. It shows the sections the Community edition produces. The Full edition adds the surprise-bill findings and the partitioning/clustering section.

Total jobs	Total bytes billed	Estimated query cost
27076	43,290.61 GB	$264.22

Estimated query cost is before the 1 TiB/month free tier and excludes storage.
Result cache: 9,865 of 27,076 jobs (36%) were served from BigQuery's result cache and billed nothing.
Errored jobs: 4 job(s) ended in an error but still billed $0.03 (4.57 GB). Failed queries are charged for what they scanned.

Cost attribution

Top query spenders (people)

Name	Jobs	Bytes	Cost
analyst.one@example.com	4779	1,017.66 GB	$6.21
analyst.three@example.com	4875	994.52 GB	$6.07
analyst.two@example.com	4780	902.16 GB	$5.51

Top service accounts

Name	Jobs	Bytes	Cost
dbt-runner@demo-warehouse.iam.gserviceaccount.com	7976	38,431.22 GB	$234.57
bi-reader@demo-warehouse.iam.gserviceaccount.com	4666	1,945.05 GB	$11.87

Top datasets/tables

Name	Jobs	Bytes	Cost
dw_prod.fact_sales	11566	5,769.54 GB	$35.21
dw_prod.fact_events_raw	210	2,621.97 GB	$16.00
dw_prod_stg.stg_sales	699	1,904.72 GB	$11.63
dw_archive.fact_sales_2024	2796	1,406.32 GB	$8.58
dw_prod_stg.stg_customers	5918	603.82 GB	$3.69
dw_prod.fact_orders	126	437.04 GB	$2.67
dw_prod.dim_customer	5919	297.52 GB	$1.82

Top queries (by cost)

Query	Jobs	Bytes	Cost
with table_shards_stage as (select info_tables.table_catalog as table_catalog, info_tables.table_sc	2638	31,656.00 GB	$193.21
select event_type, count(*) as n from `demo-warehouse.dw_prod.fact_events_raw` group by event_type	210	2,621.97 GB	$16.00
select * from `demo-warehouse.dw_prod.fact_sales` where erp_id is not null order by erp_id	633	2,379.50 GB	$14.52
create or replace table `demo-warehouse.dw_prod.fact_sales` as select * from `demo-warehouse.dw_prod	699	1,904.72 GB	$11.63
select erp_id, legal_unit, sum(amount) as total from `demo-warehouse.dw_prod.fact_sales` group by er	2214	1,678.47 GB	$10.24

Query	Jobs	Bytes	Cost
select s.erp_id, a.amount from `demo-warehouse.dw_prod.fact_sales` as s join `demo-warehouse.dw_arch	2796	1,406.32 GB	$8.58
select count(*) as rows_loaded from `demo-warehouse.dw_prod_stg.stg_customers`	5918	603.82 GB	$3.69
select sum(amount) as revenue from `demo-warehouse.dw_prod.fact_orders`	126	437.04 GB	$2.67
select day, sum(amount) as total from `demo-warehouse.dw_prod.fact_sales` where day >= '' group by d	5919	300.68 GB	$1.84
select c.legal_unit, count(*) as customers from `demo-warehouse.dw_prod.dim_customer` as c group by	5919	297.52 GB	$1.82

Identical statements are grouped: other queries by their SQL with comments and literal values removed (shortened to fit).

Beyond this report - the full edition

This community edition shows who and what is driving your BigQuery bill. The full edition adds the analysis that turns that picture into action:

• Surprise-bill risk flags - eight checks covering SELECT * on large tables, heavy scans with no result cap, missing partition filters, cross-region joins, repeated queries, zombie tables, spend on jobs that failed anyway, and large unpartitioned tables being queried.
• Partitioning and clustering review - which tables are set up to let BigQuery skip data, and which are not.
• Storage cost analysis - what your data costs to store each month, and whether physical (compressed) billing is worth it.
• dbt model attribution - which models are the biggest spenders.
• Daily cost trends and spike detection - which day, and who, caused the jump.
• A no-CLI local web app - pick your project and run the scan from the browser.

For the full edition, email **alex.vinter24@gmail.com**. Read-only, self-hosted, nothing leaves your machine.
